ABSTRACT

Changes in the practice of surgery over the last 40 years have been extraordinary. We want to reflect the progress during this period in the Community Hospital of Alcoy, Spain. Technology and staff training have improved in an extraordinary way allowing that medical assistance in the community hospitals is quite similar to that offered at the most sophisticated centers.

Keywords: Advances in surgery; General Surgery; Community hospital.

INTRODUCTION

The changes in medicine with the creation in 1967 of the National Health System (NHS) in Spain and the Intern and Residents training (IRT) system have been extraordinary. The NHS hospitals network covers medium-sized cities with Community Hospitals (CH) of less than 300 beds and 250,000 inhabitants’. Surgical improvements have been developed in recent years at University centers and similar ones are occurring at the CH level that are rarely reported but where the quality of the service is essential to serve the population.

AIM

Reflect the changes and advances in general surgery at a CH during a 40 years period.

GEOGRAPHICAL AND HISTORICAL CONTEXT

Alcoy with 60,000 inhabitants, and its health department with 140,000 persons in South-eastern Spain was first served by a magnificent Oliver Civil Hospital donated by a patron in 1868-77, but then faded with time and reflects what happened in other Spanish regions. The city, isolated, is located in mountainous area of the Valencia Region 60 km far from Alicante and 100 km from Valencia.

Alcoy CH was the first Community hospital of the Valencia Region and it was inaugurated in 1972 but the Head of Surgical Service was not appointed until 1974. The training of first IRT residents started in Spain in 1967 and graduated five years later, but many were not attracted to work in a supposedly "distant hospital" far from large centers and big cities, where the endowments were initially precarious. But by 1978 in Alcoy there were five IRT surgeons, and the coverage of other services took four more years to provide minimal services.

The Dark Years 1974-78

Aniceto Baltasar MD (AB) was appointed in 1974 as Head of Service and started working alone with only one assistant (J. Tomas MD) until 1978. Later on, 7 non specialist fellows (Del Rio, Bou, Fernández, Aracil, Pérez, Carbonell and Llopis) gave us an invaluable support. We opened an Intensive Care Unit (ICU) in 1976 with 3 beds, two pressure and three volumetric ventilators, monitors, PVC,
hypothermia blankets, anti-scar mattresses, gas analyzer, cardio conversion and pacemakers. Twelve young nurses were trained with daily classes and the translation of two books on Ventilator and Cardiac Care [1,2]

We abandoned the traditional cut-down venotomies in favor of the subclavian punctures and initiated the use of complex procedures (aortic grafts, femoro-popliteal bypasses, Swiss AEO osteo-synthesis, 52 transverse and Seldinger angiographies (52), bronchoscopies (45), intra-cavity and epicardial pacemakers (46), lung lobectomies, Comando mandible resection, fibro-gastroscopy (28), mid-sternal thoracotomy for mediastinal tumor, porto-cava shunts, Nyhus pre-peritoneal hernia and pancreatectomies.

The Alcoy's Analysis and Blood Bank Services (a magnificent volunteer institution) were excellent, with all necessary blood transfusions but w derivatives at the time.

Years 78-90. Open Surgery

Then in 1978 the four first IRT well trained surgeons (Bengochea, Del Río, Marcote, Escrivá) and by 1987 two more, Bou and Miró, joint us members of the staff. Later on Arlandis and Alonso arrived in 1990, and Serra (current Chief of the Service), Martínez and Cipagauta in 1992 (Fig. 1), and by then the surgical team with 11 members was considered complete (Fig. 1).

Colostomy Irrigation

In 1983 we founded Alcoy Ostomy Club (AOC) and Spanish Ostomy Club (SOC) and organized three meetings in Alcoy. We started colostomy irrigations in Spain [3], a very uncommon therapy and published two videos [4], and a paper with permission from the Mayo Clinic of Rochester, MN [5]. In this volunteer program a patient with a colostomy visits patients in the pre and postoperative period and shows them what a colostomy is. He teaches the patient and his family the technique of colostomy lavage before discharge and the use of a plugging device that allows him to live "without using a colostomy bag", as a normal person without any psychological traumas, to participate in social events and even to bathe in public swimming pools. All the patients have performed their irrigation every two days for years. Ms. Encarna Nadal has been teaching and caring for all patients with ostomies for 30 years and participated in two National TV programs to publicize the irrigation and received recognition awards by the Alcoy CH in November 1995 and the Rotary Club Alcoy in 2016 for his disinterested dedication.

Vascular Surgery

In the years 1970-80 there were no Vascular Surgery Units in the country but this surgery was performed in many hospitals. We started in the country the 1st use of Inahara [6] technique of eversion retrograde thrombo-endarterectomy (ERTE) that had better results than the vascular grafts. We introduced the technique in National Surgical and Vascular Surgery Congresses. An ERTE video [7] received the Motril Aesculapius Award in 1984, the most important in Spain at that time. We started the use of "Sparks grafts", an ingenious attempt to “create vessels” [8], but without long-term success, since progressive fibrosis of the grafts finally obstructed the vessels.

Major infra-abdominal aorta major surgery, mesenteric vessels, iliac, femoro-popliteal bypass, carotid aneurysms were carried out. Unilateral ERTE from aortic bifurcation to the femoral bifurcation were the most frequent under regional anesthesia.
The Valencia Vascular Surgery Society 1st Meeting was held in Alcoy in October 1988, attended by Juan Matesanz, a distinguished Boston-trained surgeon and 1st chief of the Madrid Vascular Clinic at the University Hospital (Fig. 2).

We reported on aortic aneurysms [9], internal carotid aneurysm [10, 11], combined aortoiliac and double bowel revascularization [12], venous aneurysm [13] and anastomotic aneurysm [14]. The Vascular Services in the Valencia community started working and in 1998 and then we abandoned this surgery.

Vascular and Oncologic Surgery

Nine cases of radical oncology and vascular resection were done. The 1st in 1985 was a sarcoma in the middle third of the right thigh including the femoral vessels. A radical resection of the tumor and vascular reconstruction (arterial with Dacron, femoral veins with two inverted saphenous vein grafts, and the formation of arterial-venous fistula at the ankle to prevent thrombosis of the veins) was done and this patient currently lives [15].

In 1982, a patient had a recurrent retroperitoneal metastatic disgerminoma involving the infra-renal aorta wall. She had a radical left nephrectomy and infra-renal aortic resection. A Dacron aortic graft was used to reconstruct the aorta, and is currently living [16]. Until then, only one case of aortic resection and vena cava had been published by Crawford and De Bakey [17], 7 cases of 297 sarcomas by Fortner [18] from the NYC Memorial and 13 cases by Imparato [19] at Roswell Park in Buffalo, NY, both recognized global centers dedicated to cancer.

We then performed four infra-renal aortic resections for retroperitoneal sarcomas [20] and presented a video at the ACS American Congress in Chicago at the Symposium "Spectacular Problems in Surgery" [21] an unusual technique at that time. And the ACS requested to present it again eight years later and it was done by Dr. Serra in San Francisco and is in ACS Video Library.

One of those resected sarcomas recurred at the left iliac vein 2 years later and the left iliac-femoral (left artery and vein) were resected [22], and had a cross-femoral revascularization with two saphenous (for artery and vein) were done. He suffered massive hemorrhage from pelvic veins and was treated with abdominal packing. He remained intubated at the ICU and was re-operated three days later, the pelvis was clean and the abdomen was closed, and both cross-femoral grafts remained permeable.

Thoracic Surgery

From the beginning, we performed thoracic surgeries such as bronchoscopies (from 40 to 68 per year), tracheotomies (8-12), thoracoscopy, pneumothorax (12-15), lobectomies and pneumonectomies for cancer (7-11), esophagus (9) and endocavitary pacemakers. We introduced thoracoscopy in 1993 and performed bilateral sympathectomies for hyperhidrosis, emphysematous bullae [23], neurilenoma [24] and the 1st pericardial window due to effusion in the country [25]. In 2003 all thoracic surgery was transferred to the newly created regional referral center.

Neck

We did treated thyroid and parathyroid tumors, radical neck dissections [26], parotid tumors [27], two rare cases of suffocating retropharyngeal cervical lipomas [28,29] and radical surgery for cervical esophagus cancer with gastroplasty [30]. Four esophageal lesions [31] due to autolysis with Salfumant were operated with immediate resection of the esophagus and stomach and then colonic transposition. One patient required later a dermocutaneous plastic surgery graft from the arm skin to form a tube to treat a residual pharyngeal stenosis, with good functional results. Two of these patients have colonoplasty to the oropharinx and then developed stenosis in the hypopharynx that required re-operations by the Service of Plastic Surgery of Bellvitge, Barcelona [32] with dermo-cutaneous vascularized forearm free flaps. The donor skin was covered with skin graft from the thigh (Fig. 3).
good results between 1978-85. Two patients suffered mesenteric necrosis, one 11 years later due to mesenteric rotation and another 4 years later [55].

Martínez [56-58] in 1994 obtains her Ph.D. "Cum Laude" for studies on gastric emptying after gastritis of reflux, VARY and duodenal switches. We used sphincteroplasty [59,60] according to Austin Jones [61] in 67 cases with bile duct obstruction of 558 gallbladder operations with a mortality rate of 1.5%.

Breast Surgery

The Services of Surgery and Radiology began in 1994 the 1st center for detection and screening of breast cancer in the Valencia community. We treated phyllodes tumors [32], breast carcinosarcoma [33] and mammary reconstructions with immediate prostheses [34].

Marcote [35] published DNA ploidy and S-phase of the cell cycle and active proliferation in 104 patients, flow fluidmetry in 220 patients [36-37] and was Ph.D. "Cum Laude" award in 1990. Serra (38-43) also published in 1990 extensive studies of male breast cancer with determination of the Pepsinogen C and Apolipoprotein D. He received a Ph.D. "Cum Laude" award.

Digestive Surgery in the 80's

The 1st two cases of Kock’s continent ileostomy were done in 1985 after total colectomy for diffuse colonic cancer [44-45]. A Kock double valve urinary continent ileostomy [46] was done in a patient with single kidney and recurrent bladder cancer. We published several surgical corrections of post-traumatic diaphragmatic hernias [47-52].

In the 1980s, gastro-duodenal ulcers were a very prevalent condition and we used VARY (vagotomy-antrectomy and Y-de-Roux reconstruction) [53,54] in 67 patients with very

Bariatric Surgery (Bs)

Alcoy-CH is recognized internationally as a pioneer bariatric center [74]. AB funded Spanish Society for Obesity Surgery (SECO) in 1997, the BMI-Latin magazine (www.bmilatina.com) in 2011 and became President of the International Federation for the Surgery of Obesity (IFSO) and organizer of 8th IFSO World Congress in 2003. We cofounded the European Centers of Excellence in 2013, performed in 1977 the 1st Roux-en-Y gastric bypass (RYGBP) [75], 1st metabolic surgery (MS) for hyper cholesterolemia [76], 1st separation of the vertical line in the Vertical Banded Gastroplasty (VBG) [77, 78], 1st open Duodenal Switch (DS) in 1995 [79], 1st lap RYGBP in Europe (LRGYBP) 1997 [80,81] and 1st report of internal hernias after LRYGBP [82], 1st laparoscopic DS (LDS) [83] in 2001. The paper on Sleeve Gastrectomy was one of the 1st in Europe [84] has the 61st higher bariatric citation index in the world [85]. Non-removable Wall-stents for leaks [86, 87] were used in 2000 before the removable ones were developed, performed the 1st RNY diversion for SG leaks [88], 1st diabetes surgery 2004 [89], 1st and adolescent bariatric surgery (ABS) 2008 [90] and developed the concept of Expected BMI (Body Mass Index) after Bariatric Surgery [91].

ASSOCIATIONS AND CONGRESSES

- Founders Video-Revista de Cirugia (VRC) with Dr Ballesta-1987 in four languages (French, Italian Spanish and Portuguese)
- Founder of the European Association of Video Surgery.1988
- For 20 years (1987-2007) organized yearly the Alicante Province Meetings of Surgery
- Posters. 46. Two first prizes Milan 1994 and Valencia SECO 2010
- Videos: The HC-Alcoy has published 25 videos in VRC. 101 in Spanish-. 3 first Prizes and 12 winners in Videomed and Video-Surgery Valencia 44 in English-. 2 First prizes and 3 more prizes http://www.youtube.com/channel/UCEpwVhQeohunxKOhNqC71zg
- 28 3 articles published in general surgery and 109 in bariatric. Research Gate: Maximum number of citations in the province of Alicante with Publication downloads 10,878. Views 8, 631, 1.99 per publication, 1,154 citations
